

EDUCATION

Liberty University | Lynchburg, VA

August 2024 – Present

B.S. Computer Science: Data Science | GPA: 3.69

Relevant Coursework: Python and R for Data Science, Introduction to Probability and Statistics, Linux Operating Systems, Introduction to Discrete Mathematics

TECHNICAL SKILLS

Programming: Python, R, C++

Data Science & ML: Unsupervised Learning (K-Means, Hierarchical Clustering, PCA), Time Series Forecasting & Decomposition, Regression Analysis, Feature Engineering, Model Evaluation (MAE, RMSE, Silhouette Score)

Tools & Professional: VS Code, Jupyter, Quarto, Git, Linux • AI Agent Maintenance, Workflow Automation, Document Extraction & Logic Updates, Regulatory Compliance (Insurance Filings), Process Improvement, Technical Communication

PROFESSIONAL EXPERIENCE

Hyper Company LLC

May 2025 – Present

AI Workflow Automation Intern

- Completed 25+ logic changes to production AI agents, improving accuracy and reducing edge cases for document workflows serving insurance carriers and underwriting firms.
- Contributed to launching 3 new AI automation agents for document extraction, policy processing, and participation schedule handling.
- Led development of the UMR/Participation Schedule AI Agent for automated extraction of UMR numbers, policy details, and syndicate allocations from insurance documents.
- Drove FLSO compliance updates (effective July 2026) by refining extraction logic for Lloyd's syndicate data; identified issues from 5+ insurers (incl. Bass Underwriters), enabling improved data quality.

Outback Steakhouse | Davie, FL

October 2023 – August 2024; May – August 2025

Server

- Managed up to 10 tables simultaneously in a fast-paced, high-volume environment, using de-escalation, rapid decision-making, and strong multitasking to maintain service quality.
- Coordinated effectively with kitchen, bar, and management teams while building rapport with guests and resolving issues in real time under pressure.

DATA SCIENCE PROJECTS

Customer Segmentation via Unsupervised Learning (R) | CSCN 321: Python and R for Data Science

- Performed feature engineering and standardization on synthetic retail data in R; implemented and compared K-Means and hierarchical clustering methods with PCA validation.
- Determined optimal clusters using silhouette scores and elbow plots; interpreted segments and delivered stakeholder-focused recommendations in a Quarto report.

Stock Price Forecasting with Regression & Time Series (Python) | CSCN 321: Python and R for Data Science

- Cleaned and explored historical Microsoft stock data; identified trends, volatility, and anomalies through EDA and time series decomposition into trend, seasonality, and residuals.
- Built and evaluated a linear regression model on a temporally split test set (MAE/RMSE); assessed stationarity with differencing and ACF/PACF plots and compared multiple time series forecasting approaches.
- Synthesized results across models and communicated forecasting insights and limitations to a non-technical audience via a written report.

LEADERSHIP EXPERIENCE

Calvary Christian Academy | Fort Lauderdale, FL

September 2023 – April 2024

Engineering Team Communications Lead

- Led communications for a 4-person team developing a product to solve a real-world problem; conducted extensive research and planning outside of school hours.
- Gathered feedback from engineering professionals and presented the final project to a board of engineers, earning the highest average rating in school history.
